ARTÍCULO:

***Valgothrombium paroense* sp. n.** (Acari: Prostigmata: Microtrombidiidae) from Bhutan

Ryszard Haitlinger

Abstract:

Valgothrombium paroense sp. n. from Bhutan is described and illustrated.

Key words: Acari, Microtrombidiidae, *Valgothrombium paroense*, Bhutan

Taxonomy: *Valgothrombium paroense* sp. n.

***Valgothrombium paroense* sp. n. (Acari: Prostigmata: Microtrombidiidae) de Bhutan**

Resumen:

Se describe e ilustra *Valgothrombium paroense* sp. n. de Bhutan.

Palabras clave: Acari, Microtrombidiidae, *Valgothrombium paroense*, Bhutan.

Taxonomía: *Valgothrombium paroense* sp. n.

Introduction

The genus *Valgothrombium* Willmann, 1940, is currently represented by seven species based on larvae: *V. avae* Haitlinger, 2005, *V. mallorcensis* (Haitlinger, 2003), *V. melindae* Haitlinger, 2008, *V. natani* Haitlinger, 2005, *V. stuarti* (Baker, 1999), *V. tarnavense* (Feider, 1950) and *V. valgum* (George, 1909) (George, 1909; Feider, 1955; Wohltmann & Wendt, 1996; Baker, 1999; Haitlinger, 2003, 2005, 2008). In this paper *Valgothrombium paroense* sp. n. is described as the second species of the genus found in Asia.

Material and Methods

During a visit to Bhutan in May 2008 two larvae were collected from unidentified herbaceous plants in Paro (~40 km southwestern of Thimpu). These specimens were mounted on slides using Berlese's medium. Abbreviations and terminology were adapted after Haitlinger (2008). All measurements are given in micrometers (μm).

Holotype is deposited at the Museum of Natural History, Wrocław University (MNHWU), Poland.

Taxonomy

Microtrombidiidae Thor, 1935
Valgothrombium Willmann, 1940
Valgothrombium paroense sp. n.
 Figs 1-7

TYPE MATERIAL. Holotype larva: Paro, Bhutan, 02-05-2008; leg. R. Haitlinger; (MNHWU). Paratype: one larva (deformed), same locality and collector.

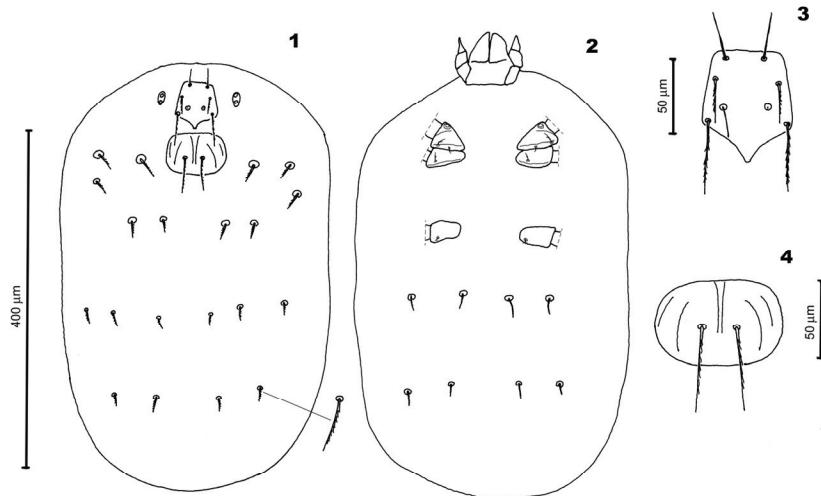

ETYMOLOGY. The species name refers to Paro, the type locality.

DIAGNOSIS. L 76, W 60, LSS 80-84, TaI 38-40, fD 20, fV 8.

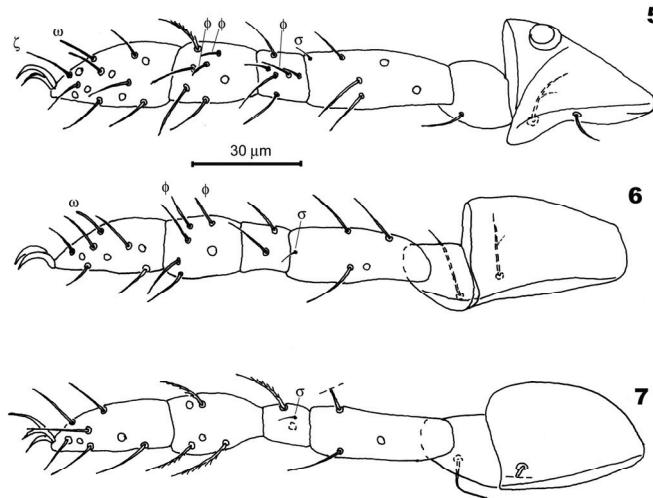

DESCRIPTION. *Idiosoma* longer than wide with 20 slightly barbed setae, each on small platelets. Two pairs of eyes on each side (Fig. 1). Scutum longer than wide with anterior border straight and posterior border with distinctly “nexus”. Sensillae S and setae AM both nude, scutalae AL and PL slightly barbed (Fig. 3). Scutellum oval with two slightly barbed setae and two lines in median part and two pairs of lines in its lateral part (Fig. 4). *Ventral surface of idiosoma* with 8 pairs of very weakly barbed setae arranged 4-4 (Fig. 2). Coxae I with two setae (one of them bifurcate) (Fig. 5), coxae II with one weakly barbed setae and coxae III with one seta (da-

maged) (Figs 6, 7). *Gnathosoma* with nude palpifemur and palpgenu. Palptibia and palptarsus badly visible. *Leg lengths.* Leg I, 198 holotype, 208 paratype, II 194, 176, III 212, 216. Ip = 604, 600. *Setal formula.* Leg I: Ta 1 ω , 1 ζ , 12?N; Ti 2 ϕ , 1B, 4?N; Ge 1 σ , 3?N; Fe 1 σ , 5?N; Tr 1N; Cx 1N, 1B (Fig. 5). Leg II: Ta 1 ω , 8?N; Ti 2 ϕ , 4?N; Ge 2N; Fe 1 σ , 4N; Tr 1N; Cx 1B (Fig. 6). Leg III: Ta 8?N; Ti 3?B, 2?B; Ge 1 σ , 2B, Fe 3?N; Tr 1N; Cx 1?B (Fig. 7). Measurements are given in Table 1.

REMARKS. *V. paroense* sp. n. differs from *V. stuarti* in the shorter W (60 vs 67-81), AW (38-44 vs 55-62), PW (48 vs 63-72), AL (28 vs 40-48), SB (28-30 vs 42-46), LSS (80-84 vs 99-107) and fV (8 vs 10), from *V. mallorcensis* in the shorter SS (20-24 vs 28-32), the longer LSS (80-84 vs 64-78), HS (58-62 vs 42-48), TaI (38-40 vs 28-34) and IP (600-605 vs 550-586); from *V. natani* in the shorter DS (24-43 vs 38-56), AW (38-44 vs 42-52), PW (48 vs 52-56), ASB (38 vs 54, SS (20-24 vs 36-44) the longer PSB (38 vs 16) and fV arranged 4-4 vs 2-2-4-2; from *V. tarnavense* in the shorter HS (58-62 vs 81), SL (50 vs 63) and fD (20 vs 28); from *V. valgum* in the longer L (76 vs 54-56), LSS (80-84 vs 55), the shorter SB (28-30 vs 44), DS (24-43 vs 55-63), HS (58-62 vs 65-67) and vF (8 vs 6); from *V. avae* in the longer AL (28 vs 20), PSB (38 vs 24), the shorter LSS (80-84 vs 96), SS (20-24 vs 32), the shape of the scutellum (oval vs rectangular) and fV arranged 4-4 vs 2-2-2-2 and from *V. melindae* in the longer L (76 vs 68), W (60 vs 49), PSB (38 vs 25), LSS (80-84 vs 65), the shorter AL (28 vs 35), PL (46 vs 62), fD (20 vs 18) and fV (8 vs 12).

Figures 1-4. *Valgothrombium paroense* sp. n.: 1. idiosoma, dorsal view; 2. idiosoma and gnathosoma, ventral view; 3. scutum; 4. scutellum.

Figures 5-7. *Valgothrombium paroense* sp. n.: 5. leg I; 6. leg II; 7. leg III.
